## Node-RED Service

The screenshot displays the Node-RED web interface within a browser window. The main workspace shows a flow named 'Flow 1' with two parallel processing paths. The top path begins with a 'Test Hello' node, which connects to a 'msg.payload' output node. The bottom path starts with an 'IBM IoT' node (labeled 'connected'), which branches into two function nodes: 'Temperature' and 'Humidity'. These two function nodes are then connected to a single 'msg.payload' output node. The left sidebar contains a 'common' section with nodes like inject, debug, complete, catch, status, link in, link call, link out, and comment, as well as a 'function' section with function, switch, and change nodes. The right sidebar shows configuration options for the flow, including a 'config' tab and a 'Deploy' button. The browser's address bar shows the URL 'node-red-mpsd-2022-11-05-us-east.mybluemix.net/red/#flow/a0455af54a0a6d1d'. The Windows taskbar at the bottom shows the date as 11:37 on 13-11-2022.
